

## Sprint-1

### Python Script

Date	15 November 2022
Team ID	PNT2022TMID34698
Project Name	IOT BASED CROP PROTECTION SYSTEM FOR AGRICULTURE

### Description:

The random sensor data's are generated and automation has been implemented through the python code instead of using hardware to implement IOT based crop protection system. And the python code need to upload the data's in IBM cloud are written in this python script.

### Python Code:

```
import random import
ibmiotf.application import
ibmiotf.device from time
import sleep import sys

#IBM Watson Device Credentials.
organization = "zf801i"
deviceType = "bharathi" deviceId
= "bharathi123" authMethod =
"token" authToken =
"123456789"

def myCommandCallback(cmd): print("Command
received: %s" % cmd.data['command'])
status=cmd.data['command'] if status=="sprinkler_on":
print ("sprinkler is ON") else :
print ("sprinkler is OFF")
#print(cmd)

try:
deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method": authMethod, "auth-token": authToken} deviceCli =
ibmiotf.device.Client(deviceOptions)
except Exception as e:
print("Caught exception connecting device: %s" % str(e))
```

```

        sys.exit()

#Connecting to IBM watson.
deviceCli.connect()

while True:

#Getting values from sensors.

temp_sensor = round( random.uniform(0,80),2) PH_sensor = round(random.uniform(1,14),3) camera =
["Detected","Not Detected","Not Detected","Not Detected","Not Detected","Not Detected",]
camera_reading = random.choice(camera) flame = ["Detected","Not Detected","Not Detected","Not
Detected","Not Detected","Not Detected",] flame_reading = random.choice(flame) moist_level =
round(random.uniform(0,100),2) water_level = round(random.uniform(0,30),2)

#storing the sensor data to send in json format to cloud.

temp_data = { 'Temperature' : temp_sensor }
PH_data = { 'PH Level' : PH_sensor } camera_data
= { 'Animal attack' : camera_reading} flame_data =
{ 'Flame' : flame_reading } moist_data = {
'Moisture Level' : moist_level} water_data = {
